

<Marine Organism Rearing Log>

9 AM, August 10, 2022

Weather: Sunny

Water temperature: 18.2°C

Training on rearing in normal seawater.

We made brand-new abalone houses. Abalones have a bent for dark condition, so the old houses were insufficient to block the light. Now, abalones are living in the tank more comfortably than ever.

By the way, an abalone died on August 8, 2022.

<Next report will be on August 15>
