

<Marine Organism Rearing Log>

9 AM, August 29, 2022

Weather: Sunny

Water temperature: 18.3°C

Filtrating performance did not improve very much on rearing training started on July 21, 2022 (using normal seawater), however, finally eventually concentration levels of ammonia decreased in last week and nitrous acid in this week. In consequence of seawater quality improvement, the abalones regains vitality and the flounders are in the pink!
