

<Marine Organism Rearing Log>

9 AM, August 30, 2022

Weather: Rainy

Water temperature: 18.5°C

Professor Kato from the Aquaculture Research Institute, Kindai University visited our facility and examined our rearing environment of flounders and abalones on rearing training. Prof. Kato generously advised us on necessary hardware and software of rearing them in closed circulation system tanks in order for the flounders and abalones to live long and vigorously.
