

<Marine Organism Rearing Log>

9 AM, September 5, 2022

Weather: Sunny

Water temperature: 17.8°C

An intruder in the rearing training tank. A sea hare was found growing between the leaves of sea lettuce which we collected and are cultivating since August. Extermination was one of our options due to its discharge of bacillus, however, we quarantined it in a beaker and are keeping it. How adorable!
