

<Marine Organism Rearing Log>

9 AM, September 16, 2022

Weather: Sunny

Water temperature: 21.0°C

We have approx. 800 flounders in the rearing test tanks and if we feed them at a time, it makes cleaning the tank very hard work so that we separate them into two groups. We will report the feeding from now on and now let us announce that we wrapped up rearing training in the mockup tanks. And will report condition on the flounders rearing in test tanks from next report.
