

<Marine Organism Rearing Log>

9 AM, September 30, 2022

Weather: Sunny

Water temperature: 18.0°C

Today, we have started rearing test with collecting sample of seawater and the flounders in the tanks. Tanks will be streaming live on YouTube below.

<https://www.youtube.com/channel/UCLen8NHHX2WrMvn6ZYfAjJA>

The yellow tank is the tank to which ALPS treated water will be added in the future, and the blue tank is the normal seawater tank. In order to avoid human error, we use different colored tanks.

	<p>TEPCO HD Marine rganism Rearing Test Live stream</p> <p>Tanks to be added ALPS treated water (yellow tank)</p> <p>Tank for regular seawater (blue tank)</p> <p>Long shot cam</p> <p>In order to avoid human error, different colored tanks are used. Blue tank: regular seawater Yellow tank: ALPS treated water added seawater (will be added later) Light will be off to reduce stress of the flounders</p>
