

<Marine Organism Rearing Log>

9 AM, October 20, 2022

Weather: Sunny

Water temperature: 19.3°C

In order to measure tritium concentration in bodily fluid, it is necessary to extract fluid from the sample. At first, vaporize the fluid, then quench it with dry ice and freeze it to collect fluid. The samples will be dehydrated gradually and this procedure is called “freeze-dry”. It takes about 3 days to complete mensurative sampling.
