

<Marine Organism Rearing Log>

9 AM, October 26, 2022

Weather: Sunny

Water temperature: 18.4°C

At 4 am, we started tritium measurement test in bodily fluid of abalones. The 95 abalones (including spares) out of all the abalones which taken in the regular seawater tank yesterday were transferred to the tank with ALPS treated water and tested. Shellfish ingest seawater faster than fish so that we take abalones out of water 1, 2, 4, 8, and 16 hours later.
