

<Marine Organism Rearing Log>

10 AM, November 25, 2022

Weather: Sunny

Water temperature: 17.5°C

One abalone was found dead on November 22 in the ALPS treated water added tank. We analyzed that the abalone was unable to feed himself due to stress of transfer and weakened. We evaluate that we are being able to keep the ammonia concentration low, so the number of deaths is less than rearing training. There have been no flounder deaths.

<Next report will be on November 28, 2022>
