

<Marine Organism Rearing Log>

9 AM, December 8, 2022

Weather: Sunny

Water temperature: 18.5°C

Let us inform you that condition of water quality improvement (Vol.2) which is taken place at the rearing training facility. Nitric acid in the rearing water is decreasing uneventfully by the denitrification unit installed in the beginning of November. No negative impact is found on not only the flounders and the abalones but also on water quality, we will introduce the denitrification unit to the rearing test facility.
