

<Marine Organism Rearing Log>

9 AM, December 19, 2022

Weather: Sunny

Water temperature: 17.6°C

One of the reason of the abalones' trauma is thought to be high-density of the abalones in the tank and we are shifting the kind of organisms and the number to accommodate. The flounders in 4 tanks to be accommodated to 3 tanks and some of the abalones will be accommodated to the extra tank. Today, we have started transferring the flounders for the first step.
