

<Marine Organism Rearing Log>

9 AM, December 20, 2023

Weather: Sunny

Water temperature: 17.7°C

Tank transferring report <Vol. 2>. To transfer the abalones without giving stress as little as possible, we move them to the new tank with the shelter and place back it to the old tank after all the abalones unsticking, then repeat the same procedures. Untill today, we have transferred about one third of individuals.
