

<Marine Organism Rearing Log>

9 AM, December 27, 2022

Weather: Sunny

Water temperature: 17.6°C

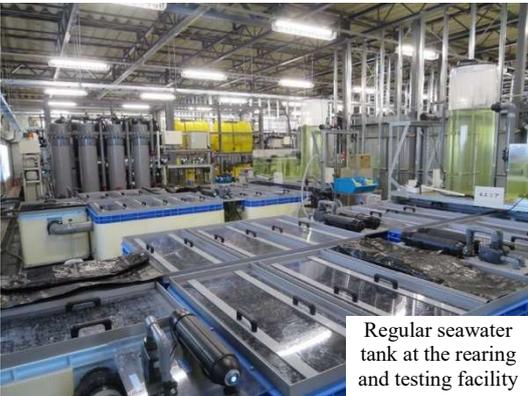

We cleaned and tidied up the rearing and testing facility and rearing and training facility before the year-end and new-year holidays, and entrusted our duties to caretakers that will be present during the vacation. The caretakers will clean the tanks and feed the organisms every day; however, rearing log entries will be suspended from December 29, 2022 to January 3, 2023. The YouTube live stream will continue during the year-end and new-year holidays.

ALPS treated water added seawater tank at the rearing and testing facility

Low-concentration tritium seawater tank at the rearing and testing facility

Regular seawater tank at the rearing and testing facility

Regular seawater tank at the rearing and training facility
