

<Marine Organism Rearing Log>

9 AM, January 23, 2023

Weather: Cloudy

Water temperature: 17.7°C

We have revised the report as we found an error on the number of dead abalones. The dead abalones in the ALPS treated water added tank outnumber the ones in the regular seawater tank, however, the number of abalones for research is higher than ones in the regular seawater tank, causing an "overcrowded" condition. This could lead to a high risk of injury and death to the abalones during daily cleaning or other operations.

The number of dead abalones and removed for research				
	No. of dead abalones		Removed for research	
	1/14-20	Accumulated	1/14-20	Accumulated
Regular seawater①	0	3	0	0
Regular seawater②	2	8	0	0
ALPS treated water added①	7	15	0	0
ALPS treated water added②	3	14	0	1

A flounder died in ALPS treated water added tank②
