

<Marine Organism Rearing Log>

9 AM, January 27, 2023

Weather: Sunny

Water temperature: 17.8°C

This week we experienced a series of cold days. On January 25, 2023, the outside temperature was -8°C in the morning. The heater works and keeps the tank at a certain temperature. The flounders seem to spend time comfortably as if they were living in the super-insulated house. It is a tough environment for the caretakers, but we will hang in there.

<Next report will be on January 30, 2023>

The number of dead abalones and removed for research				
	No. of dead abalones		Removed for research	
	1/21-26	Accumulated	1/21-26	Accumulated
Regular seawater①	1	4	0	0
Regular seawater②	1	8	0	0
ALPS treated water added①	0	15	0	0
ALPS treated water added②	0	14	0	1

No dead flounders
* For accuracy, counted from Friday of the previous week to Thursday.
