

<Marine Organism Rearing Log>

9 AM, February 15, 2023

Weather: Sunny

Water temperature: 17.7°C

Since the abalones are nocturnal, they hardly move during the day. We did a night safari of the abalones and observed their nocturnal life. We were surprised at the active abalones that we rarely see. The abalones in the red light were reaching their tentacles all the way out, actively moving around and feeding themselves.
