

<Marine Organism Rearing Log>

9 AM, February 20, 2023

Weather: Sunny

Water temperature: 18.4°C

The flounders which we started rearing from last September, they were only 6 months old and 16cm long on average. They are now almost a year old and about 25cm long, and we have increased the size and amount of food. However, the body length varies depending on the individual, the smaller flounders may have a hard time eating this size.

The size and amount (weight) of the food are increased to accommodate the growth of the flounders.
(Now the junior flounders are fed the medium size, the senior flounders the largest.)
