

<Marine Organism Rearing Log>

9 AM, March 23, 2023

Weather: Cloudy

Water temperature: 18.2°C

The additional feed to bacteria and the heat from heater boosted the function of the denitrification chamber that converts nitric acid into nitrogen gas and discharges it to the outside of the system. Since we improved the apparatus so that we can monitor the index of the anaerobic condition (ORP value) within the chamber continuously, we will try to find more efficient ways of denitrification operation.
