

<Marine Organism Rearing Log>

9 AM, April 10, 2023

Weather: Sunny

Water temperature: 18.1°C

As the abalones grew larger, we decided to increase the amount of feed by about 10%. We also decided to place the abalones attached to the back of the shelter's top board on the upper side while cleaning it so that they would not be caught between the shelter's stand and the top board. Abalones are gorgeous, but require close attention in rearing.
