

<Marine Organism Rearing Log>

9 AM, April 17, 2023

Weather: Sunny

Water temperature: 18.1°C

We decided to measure nuclides which emit gamma rays including cesium just to be safe, and we drained flounder meat and tried to shred it into small pieces to put them in a container for measurement. However, the dried meat was as hard as dried cod, and it was difficult to make it into small pieces. So we brought in a food processor and it worked.
