

<Marine Organism Rearing Log>

9 AM, June 2, 2023

Weather: Rainy

Water temperature: 18.6°C

Eighth month of the test rearing. Performance of the pump that circulates rearing seawater has been gradually deteriorated and it needs to be inspected. Therefore, we tried to disassemble and clean the pump for the rearing training, which is being used under the same conditions as the rearing test. Since performance improvement was confirmed, we will reflect findings to the test rearing.

<Next report will be on June 5, 2023>

The number of dead abalones and removed for research

	No. of dead abalones		Removed for research	
	5/26- 6/1(No.)	Survival Rate (%, Accumulated)	5/26- 6/1(No.)	Accumulated (No.)
Regular seawater①	0	75.5	0	0
Regular seawater②	3	71.0	0	0
ALPS treated water added①	1	69.8	0	0
ALPS treated water added②	2	62.1	0	1

* For accuracy, counted from Friday of the previous week to Thursday.

* No dead flounders
