

<Marine Organism Rearing Log>

9 AM, June 9, 2023

Weather: Rainy

Water temperature: 17.3°C

The radioactivity (such as cesium) of food is expressed in the amount contained in 1 kg of the sample. On the other hand, tritium contained in body fluid of marine organisms is measured in the condition of water and is expressed in a value per litre to allow comparison with other kind of water (such as rearing water).

<Next report will be on June 12>

	The number of dead abalones and removed for research			
	Death	Removed for research		
	6/2- 6/8 (No.)	Survival Rate (%. Accumulated)	6/2- 6/8(No.)	Accumulated (No.)
Regular seawater①	0	75.5	0	0
Regular seawater②	0	71.0	0	0
ALPS treated water added①	2	68.8	0	0
ALPS treated water added②	1	61.6	0	1

\* For accuracy, the number of dead abalones and removal for research counted from Friday of the previous week to Thursday.

\* No dead flounders
