

<Marine Organism Rearing Log>

9 AM, June 20, 2023

Weather: Sunny

Water temperature: 17.9°C

On-site training for new employees in FY2023 began last week, and they visited the rearing test facility. They listened intently as a member of the rearing staff talked about the purpose of the rearing test, troubles encountered, and characteristics of the flounder and abalone. The new employees seemed very interested to see flounders swimming around in the tanks, eager to be fed.
