

<Marine Organism Rearing Log>

9 AM, July 21, 2023

Weather: Cloudy

Water temperature: 18.5°C

The water thermostat on the cooler usually installed on seawater series #2 has begun to show signs of failure. So, we replaced the cooler with a spare (new) one just to be safe in order to ensure that we can make it through the hot summer. It is important to be proactive. (Next report will be on July 24.)

 <p>Cooler with failing thermostat</p>	 <p>Installing a new (spare) device</p>
