

<Marine Life Rearing Log>

9 AM, September 22, 2023

Weather: Sunny

Water temperature: 18.7°C

Here are some more pictures of the flounder at the bottom of the tank. When in areas with currents, flounder stay still by letting their fins ripple to reduce the lift caused by the currents and keep their bodies attached to the seabed. Their fins act like the spoiler on a sports car.

<Next report will be on September 25>

The number of dead abalone / removed for research

	No. of dead abalone		Removed for research	
	9/15-9/21 (No.)	Survival Rate (%, accumulated)	9/15-9/21 (No.)	Accumulated (No.)
Regular seawater ①	1	63.2	0	0
Regular seawater ②	3	51.0	0	0
ALPS water added ①	2	54.7	0	0
ALPS water added ②	3	49.3	0	1

\* No flounder deaths

\* For accuracy, counted from Friday of the previous week to Thursday
