

<Marine Life Rearing Log>

9 AM, October 4, 2023

Weather: Rainy

Water temperature: 18.3°C

An underwater camera has been submerged in the flathead flounder tank for live-streaming on YouTube. We are trying to make improvements so the video doesn't cut out, and past videos are also available for viewing. The flounder have become accustomed to the presence of the camera, and they dance about and bite wildly when feeding without concern for the camera. Currently, feeding time is on Mondays, Tuesdays, Thursdays, and Saturdays.
