

<Marine Organism Rearing Log>

9 AM, October 23, 2023

Weather: Sunny

Water temperature: 17.9°C

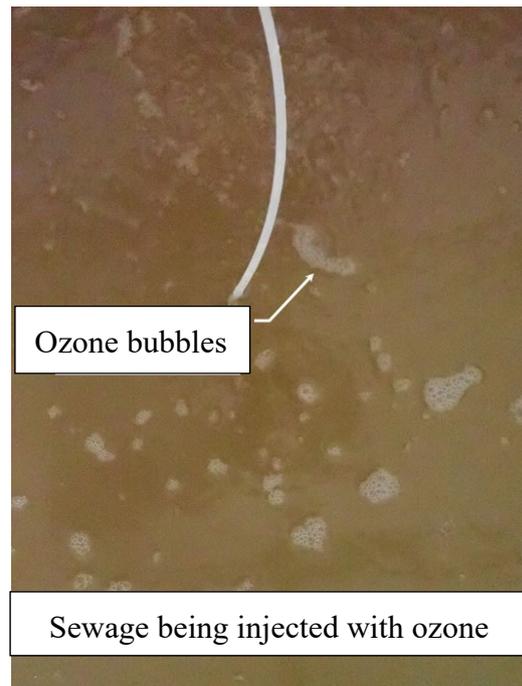

The seawater used to check the quality of the rearing water and the sewage water generated during cleaning are legally treated as radioactive liquid waste, so they cannot be disposed of as is. For this reason, they will be collected in a dedicated tank, decomposed by ozone to decompose organic matter, and treated in the multinuclide removal system (ALPS).

Sewage tank where organic matter is decomposed by ozone
