

<Marine Organism Rearing Log>

9 AM, October 24, 2023

Weather: Sunny

Water temperature: 18.6°C

The rearing tank has an acrylic lid to keep the flounder and abalone from escaping. As the outside temperature drops, the temperature of the rearing seawater has increased relatively thereby causing condensation to form on the inside of the lid. Care must be taken to prevent the water from dripping onto the floor so that no one slips and falls.
