Fukushima Daiichi D & D Engineering Company

Today the last of eight segments was put in place by crane to complete installation of the dome roof cover etc. for spent fuel removal at Unit 3 of Fukushima Daiichi NPS.

This work ended with the project shortened by about half a month through off-site training and arrangement/coordination of on-site operation.

We will continue to move forward steadily with the operation to remove spent fuel beginning from around the middle of FY 2018, always making safety our top priority.

## <Outline>
