

## Charging of Purchase Cost

< Appendix >

Based on the Surplus electricity buyback program for the photovoltaic power generation, the purchase cost from the previous year (January to December) is charged as "solar surcharge" in the following fiscal year (April to March).

On the other hand, based on the feed-in-tariff, the purchase cost of this fiscal year (April to March) is charged as "Renewable energy power promotion surcharge" from April to March in the same fiscal year.

As the timing that purchase cost is charged is different for these two systems, we request the customers to incur both "Renewable energy power promotion surcharge" and "Solar Surcharge" during the transitional period.
